

THE DUNCAN DISPATCH

MARCH 2009 EDITION

Welcome to the introductory issue of The Duncan Dispatch, a monthly newsletter for Duncan Tool's valued customers. We hope you'll find this and future issues both interesting and informative.

Thanks...

We'd like to take this opportunity to say **thank you very much for your continued business.** We realize that you have many choices these days for manufacturing vendors. It is truly a buyers market and there are some shops that are offering "bargain" pricing. Often times, though, it is really no bargain at all as quality and service are the first corners to be cut and inferior products ultimately prove to be very costly.

We, however, don't cut corners. We are committed to providing you with the best overall value based on price, service, quality and delivery. We will continue to work to earn your future patronage by providing you with the Quality Products and Professional Service that you have come to expect from us. Thanks again and we look forward to serving you in year ahead.

Spotlight Application...

Duncan Tool, Inc. recently designed and manufactured a 3-Station, 90-Ton Hydraulic Press System. Each independently operated station can apply up to 30 tons of force for a custom metal forming and cutting operation. This heavy-duty fabricated steel machine was designed for durability and ease of use. It utilizes top quality components such as Allen-Bradley controls, Parker Hydraulics and Omron STI light curtains.

Duncan Tool has many years experience in designing and building custom machinery and equipment providing turn-key systems, including full controls, tooling, framing, hydraulics and pneumatics. Our specialty is single-station and multi-station forming, cutting and assembly machines. Check out more applications at www.DuncanTool.com.

Did you know...

Duncan Tool offers complete mechanical design services in AutoCAD® 2d or SolidWorks® 3d. Whether it's gages, fixtures, tooling, dies or custom machines, Duncan Tool has the tools, experience and know-how to design it... right.

Feedback...

We value your input. Won't you take a minute and let us know how we are doing? Also, please let us know if there are there any applications that we can help you out with? You can contact us at 937.667.9364 or via email at dti@duncantool.com.
